# Lineal

## Components for clear presentations

Editable examples. A small, clear API.

**Components**
Code
Layouts

## Components

- Callouts
- Metrics
- Steps
- Data tables
- Comparisons
- Quotes and repositories

**A decision needs a little context**
Put the important qualification beside the point it explains.

**Ready for review**
The draft includes the agenda, supporting data and next steps.

**One dependency remains**
Confirm the venue before sending the invitation.

Set `title`, choose a `tone`, then write ordinary Typst content.

Give the value a clear label and enough context to interpret it.

**Workshops planned**

**24**

Across six locations

**Places reserved**

**86%**

**+12 percentage points**

Compared with last month

**Until launch**

**4 weeks**

Planning window

> These figures are fictional examples, not measured results.

1. **Prepare**
   Collect the source material and agree the audience.
2. **Review**
   Check the claims, examples and reading order.
3. **Share**
   Publish the PDF and keep the editable source.

## For a detailed handover

A vertical list leaves room for longer descriptions. Start numbering from any positive integer.

4. **Run the rehearsal**
   Check the timing and links.
5. **Send the materials**
   Include the source and final PDF.

| Session | Places | Reserved | Status |
|---|---|---|---|
| Getting started | 30 | 24 | Open |
| Working with data | 24 | 24 | Full |
| Practical workshop | 20 | 17 | Open |
| Questions and feedback | 40 | 28 | Open |

## Keep the useful structure

Numeric columns align to the right. A highlighted row draws attention without adding a second legend.

## Stay editable

Cells accept text, numbers and rich content. Headers repeat automatically in longer documents.

Fictional workshop schedule.

Option A

### Independent sessions

People choose the topic that fits their work.

- Flexible attendance
- More scheduling choices
- Each session stands alone

Option B

### A guided programme

A cohort follows the same sequence together.

- Shared starting point
- Time for practice between sessions
- Easier follow-up

Choose the labels, column widths and content. Both panels can hold prose, lists, figures or code.

> Give the audience one clear point to carry into the next conversation.

**Editorial guideline**

## Connect the slides to the source

Repository links keep examples and implementation close together. Language bars accept any positive weights.

**ellsphillips/lineal**

- Typst 100%

# Code

- Syntax in light and dark
- Compact code comparisons
- File labels and custom colours

components/**counter.svelte** Svelte

```svelte
<script lang="ts">
  let count = $state(0);
  const label = $derived(`Count: ${count}`);
</script>

<button onclick={() => count++}>
  {label}
</button>
```

state/**counter.svelte.ts** Svelte TS

```ts
export class Counter {
  value = $state(0);

  label = $derived(
    `Count: ${this.value}`
  );
}
```

Selectable source, filename-aware syntax and emphasis on the lines that matter.

## An explicit transformation

```
const names = people
  .filter(person => person.active)
  .map(person => person.name);
```

## A reusable helper

```
const names = activeNames(people);
```

description.ts TypeScript

```
const description = "Long descriptions wrap at natural text breakpoints while keeping the original source line number.";
```

One logical line keeps one number, even when it wraps.

components/**counter.svelte**

state/**counter.svelte.ts**

components/**counter.tsx**

lib/**format-date.ts**

content/**workshop.typ**

scripts/**export.py**

**settings.ts** TypeScript

```
export const ready = true;
export const title = "Workshop notes";
```

Set a surface palette, inherit the document font and add a custom syntax theme when needed.

# Layouts

- Columns with useful proportions
- Panels and measured frames
- A complete team update

# Keep the main point in view

A wider column carries the explanation. A narrower column holds the supporting detail.

Change `widths` to fit the content rather than shortening every sentence to fit equal cards.

**The next decision**
Which example will help this audience understand the idea fastest?

### Equal columns

Omit `widths` for a balanced split.

### Independent content

Use any Typst component in either column.

### A natural-height panel

A surface groups related content. It grows with its text and inherits the surrounding typography.

Change the fill, stroke, inset or radius at the call site.

### A fixed frame

1. Draft
2. Review
3. Publish

**Catch layout mistakes while compiling**
A frame reports vertical overflow. It does not crop the content or make the text smaller.

# 3.3 A complete team update

**Sessions ready**

**6**

Fictional programme update

**On track**

Materials are ready. The final review focuses on accessibility and timing.

## Next steps

1. **Rehearse**
   Check timing with the facilitators.
2. **Publish**
   Send the slides and source files.

| Review | Owner |
| --- | --- |
| Accessibility | Morgan |
| Timing | Sam |
| Publishing | Alex |
